Professional Summary

Machine Learning–focused Data Scientist with graduate training in Data Science (M.S., University of Colorado Boulder, Jan 2026) and a background in mathematics and software engineering. Skilled at translating ambiguous business questions into measurable frameworks, building interpretable baselines, validating assumptions, and iterating toward production-ready ML systems.

Technical Expertise

- Languages: Python, SQL, R
- Machine Learning: scikit-learn, PyTorch, regression, classification, feature engineering
- NLP: Topic modeling (LDA), embedding-based workflows, contextual classification
- Statistics: Bayesian inference, hypothesis testing, ANOVA, regression diagnostics
- Data Engineering: ETL pipelines, PostgreSQL, MySQL, Spark (foundational)
- Visualization: Power BI, Tableau, Matplotlib
- Infrastructure: Docker, Git, Linux

Selected Projects

- **Housing Affordability Analytics (FRED + Zillow, R)** – Built reproducible economic analytics pipeline integrating mortgage rates, median income, and home price data; designed affordability index with documented assumptions and time-window validation; identified and corrected forward-looking data leakage risks; produced executive-style dashboard exploring rate sensitivity.
- **Labor Market Intelligence Dashboard (API + Power BI)** – Collected and structured job posting data; engineered features for skill demand, compensation bands, and remote trends; built interactive dashboards; designed reproducible ingestion workflow.
- **Unsupervised Topic Modeling (NLP)** – Built LDA and embedding-based topic models; performed preprocessing and evaluated topic coherence for interpretability.
- **Supervised Marketing Modeling** – Engineered behavioral features; built classification pipelines; addressed class imbalance and evaluated ROC-AUC and precision/recall tradeoffs.

Professional Experience

- **Data Science Course Facilitator – University of Colorado Boulder (Remote)** – Facilitate graduate coursework in Probability, Statistics, Ethics, and Data Visualization; mentor 30+ students per term; translate Bayesian reasoning into applied use cases.
- **Software Developer (2016–2018)** – Built Python-based trading console; developed iOS and .NET applications with API integrations and scalable architecture.

Education

- M.S. Data Science – University of Colorado Boulder (Expected Jan 2026)
- IBM Data Engineering Professional Certificate – Coursera / IBM
- B.S. Mathematics – University of Kansas
