◦ SKILLS ◦

Python

Scala

SQL

R

Apache Spark

Apache Kafka

Apache Airflow

Pandas/Numpy

Sci-Kit Learn

Jupyter Notebooks

Machine Learning

ETL Pipelines

Data Warehousing

PostgreSQL / MySQL

MongoDB

Apache Cassandra

Microsoft Azure (Data Services)

Docker & Docker Compose

Data Visualization

Redash

Grafana

Matplotlib / Seaborn

PROFILE

Experienced Software Developer with 6 years of success designing and developing high-performance applications across multiple platforms. Proven ability to lead projects, optimize complex systems, and collaborate effectively with cross-functional teams. Actively transitioning into Data Analytics with strong skills in SQL, Python, statistics, and data engineering. Driven to turn data into actionable insights that solve real-world problems and support informed decision-making.

EMPLOYMENT HISTORY

Data Science Course Facilitator at University of Colorado Boulder, Boulder

April 2025 — Present

- Facilitation of graduate-level courses for 30+ students per term in Probability, Statistics, Ethics, Cybersecurity, and Data Visualization
- Break down complex topics like probabilistic modeling, ethical AI, and visual data storytelling
- Promote engagement via discussion boards, virtual office hours, and prompt feedback
- Assess assignments with detailed input to reinforce theory and practical skills
- Mentor and support diverse students in a remote learning environment through consistent communication

Stay at Home Parent at Home, Olathe

April 2018 — April 2025

- Nurtured my daughter's well-being from birth to age 4, serving as her primary caregiver.
- Seized a precious opportunity to be actively present during her formative years before she embarked on her educational journey.
- Eagerly poised to relaunch my career in development, harnessing newfound experiences and skills cultivated during my time as a dedicated parent.

Software Development Support at 3 Fuerzas Technology Solutions (EDZSystems), Overland Park

January 2018 — March 2018

- Led iOS and Android beta improvements for rapid deployment on Apple and Google Play Stores
- Developed cross-platform features in Objective-C, Swift, Java, and REST, contributing to 4+ successful app releases
- Updated data import models and executed seamless framework integrations
- Developed in Objective-C, Swift, Java, and REST using Xcode and Android Studio
- Worked across MacOS and Windows using Bitbucket and Git for version control
- Troubleshoot and enhanced complex mobile apps with strong adaptability and problem-solving skills

Statistical Inference
Hypothesis Testing
Regression Analysis
IBM Cloudant
Git / GitHub
Linux / Shell Scripting
Data Modeling
Experimental Design (e.g., ANOVA)
Data Storytelling
Communication (for virtual course
facilitation, etc.)
Team Collaboration
(cross-functional experience)

Software Developer at SVP Consulting, New Jersey

February 2018 — April 2018

- Built a high-performance Forex trading console using Python and MQL4 with Forex API integration
- Implemented asynchronous threading and event listeners for automated, real-time trading
- Used pipenv to manage Python environments and streamline development
- Converted raw JSON trade data into Pandas dataframes for analysis and automation
- Developed .txt file import/export functions to simplify data handling
- Utilized Git for version control and solo-managed the project end to end
- Portfolio: [Upwork Profile](#)

Software Developer at Harvest Moon Studios, Los Angeles

July 2016 — February 2017

- Led iOS app development for NOAA/NPS with animated transitions, photo galleries, and touch navigation using Swift in Xcode
- Built and optimized a scalable image library for efficient batch page instancing across platforms
- Developed a .NET WPF app with multi-touch support, custom UI animations, and advanced navigation for LA civic spaces
- Migrated Java graphics scripts to C# to improve performance and efficiency
- Created Python scripts for dynamic physics-based collision in animations
- Processed USGS/GIS heightmap data in Python for terrain colorization and hillshading

EDUCATION

Masters of Science Data Science, University of Colorado Boulder, Boulder

January 2024 — Present

I am currently working towards my Data Science degree.

IBM Data Engineering, Coursera

September 2023 — December 2023

<https://coursera.org/share/5284efe66e8425bf918d6f2a67f4350c>

Bachelors of Science Mathematics, University of Kansas

Full course list & certificates

<https://github.com/christophermoverton/education-certification/edit/main/README.md>

PROJECTS

Supergraph GraphQL API example template, Olathe

August 2024 — August 2024

Implemented a GraphQL supergraph in Rust, integrating multiple subgraphs (Redis, MySQL, MongoDB, Neo4j) into a unified API, enabling federated queries across microservices.

Languages used:

- **Rust:** For implementing the GraphQL supergraph and managing subgraph federation.
- **GraphQL:** For defining schemas and queries across microservices.

[Project link](#)

Weather Alert App, Olathe

August 2024 — August 2024

Created a weather alert system using Kafka for message brokering, Kafka Streams, Grafana for monitoring, and Redash for data visualization. Utilized Docker Compose for deployment.

Languages used:

- **Python:** For building the Kafka Stream application and data processing tasks.
- **SQL:** For data visualization and querying in Grafana and Redash.
- **YAML/Dockerfile:** For Docker and Docker Compose configuration.
- **Java:** for stream transform operations
- **Bash:** for linux shell scripting

[Project link](#)

Environmental Data Pipeline, Olathe

September 2024 — September 2024

Developed a scalable data pipeline for collecting, processing, and analyzing environmental data using Apache Airflow, Spark, JupyterLab, and PostgreSQL. Managed within a Dockerized environment for orchestration and scalability.

Languages used:

- **Python:** For data processing, scripting, and integration with Apache Airflow and Spark.
- **SQL:** Used within PostgreSQL for managing and querying environmental data.
- **Shell scripting:** For automating setup and deployment within Docker.
